Proper Installation/Ducting Is Extremely Important To Ensure Maximum Performance From Any Ventilation Product

• All CFMs stated based on tests with .1 static pressure: without applying static pressure (some brands consciously do not), CFM could be greatly overstated.
• Duct run length is for general reference only; for longer duct runs, increase duct size and contact a qualified and trained installer.
• Straight runs and gradual turns are best; for example, each 90° elbow is equivalent to 5-10 feet (1.52-3.05cm) of straight run.
• Never use flexible duct; it creates back pressure/air turbulence and greatly reduces performance.
• Proper performance is dependent upon proper ducting; make sure that a qualified and trained installer is used.
• Check with a qualified and trained installer or local codes for makeup air requirements, if any.
• Max. amp rating for hoods includes recommended ventilator kit rating; all products must be hard wired direct with 2-wire with ground
• A 1200 or 1500 CFM (if applicable) ventilator kit, or in-line blower should be used when installed over range/rangetops with gas char-grill.
